Summary

Frontend developer with a Computer Science background applying React, HTML/CSS, and JavaScript/TypeScript across industry, academic, and personal projects to build accessible, polished UIs. Comfortable working from design specs (Figma) through to implementation, with a strong eye for clean, responsive interfaces. Proactive learner and collaborative engineer.

Work Experience

Software Engineer – ROAVER

Mar 2026 - Jul 2026

- Independently built the majority of the frontend MVP (minimal viable product) for a pre-launch, travel/activity content-sharing platform under the CTO's mentorship, contributing to key architectural decisions on data structures, responsive layouts, and mock backend design ahead of full API integration.
- Delivered 5 core pages (JWT authentication, saved content, creator posts, search/filter/sort functionality, and a details-view modal) using TypeScript, React, Next.js, and Chakra UI, learning the latter two on the job.
- Identified duplicated pagination logic between the experience and creator grid components and extracted it into a shared custom hook, with both components reused across 3 pages.
- Built a library of 10+ reusable layout components using React's composition pattern and reusable JSON-based mock data loading utilities.
- Translated sparse desktop-only Figma designs into responsive desktop/mobile layouts, including interactive states and transitions not specified in the original designs.
- Used Claude Code to accelerate prototyping and boilerplate (e.g. generating mobile layout drafts from Figma references and JSX scaffolding) while owning architecture, component design, and debugging.
- Participated in 4-person team standups and pair programming with the CTO, building TypeScript fluency through the team's existing codebase and my own hands-on implementation.

Education

University of New South Wales (UNSW)

Completed Aug 2025

- Bachelor of Computer Science with Distinction.
- Relevant coursework including Software Engineering Fundamentals, Web Front-End Programming, Human Computer Interaction, and Database Systems.
- Balanced a 2-year leadership role in the UNSW Teochew Student Association (TCSA) with full-time study and part-time work, sharpening planning and prioritisation skills.
- Applied user-centred design, accessibility guidelines, and HCI (human computer interaction) concepts across multiple web application projects.

Projects

Web Grading Application - Client Project (University)

- Built a responsive ~10-page web application used by educators to assess students and review their grades, including an admin dashboard for monitoring results and student progress.
- Owned design of end-to-end user flow and consistent interface design in Figma, prioritising clarity, accessibility, and ease of use across desktop and mobile.
- Implemented accessibility-focused features such as text to speech support and persistent note taking.
- Developed the frontend using HTML, CSS, JavaScript, React, and Material UI.
- Collaborated closely with 5 team members and a stakeholder to refine requirements and deliver user-centred outcomes.

Simulated Charity Website - UI/UX Design Project (University)

- Designed low and high fidelity Figma prototypes for a multi-page charity website with a clear user flow and clear call to action.
- Created reusable UI components and variants in Figma to support scalable, consistent design.
- Ran usability testing with 8 participants as part of a 4-person team, using iterative feedback to improve clarity, accessibility, and overall user flow.

Interactive Forum Interface (University)

- Built an interactive frontend interface based on a pre-defined backend API, requiring close alignment to data shape.
- Applied component-based design patterns to improve interface consistency and usability.
- Implemented using HTML, CSS, JavaScript, and Bootstrap.

Personal Website - Interactive UI/UX Exploration (WIP)

- Designing and iterating a personal website to explore interactive design and user experience improvements.
- Implementing using CSS and JavaScript (React).

Skills

Frontend Development

- HTML, CSS and JavaScript/TypeScript
- React (component-based architecture, hooks, state management, Context API)
- Next.js
- UI frameworks: Material UI, Bootstrap, and Chakra UI
- Translating Figma to code (low/high fidelity prototyping to implementation)
- Responsive and accessibility-focused UI development
- REST API integration and mock data layers
- UX informed design process (user flows, usability testing, accessibility-first decisions)

Tools and Collaboration

- Git, Jira, AI assisted development (Claude Code)
- Figma, Canva
- Familiar with SQL and PostgreSQL fundamentals (coursework)
- Clear written and verbal communication
- Collaborative team player
- Ownership-driven mindset with a strong willingness to learn
